

# Natural detox with volcanic minerals

## WHY DETOX?

With our modern diet, we unfortunately not only supply our bodies with valuable substances such as vitamins and minerals, but also take in substances that can be harmful to our health in certain quantities. Such substances include environmental contaminants, such as heavy metals and aluminium, which can enter our food via contamination of the air, water and soil. These substances have the unpleasant property of accumulating in the food chain. These substances can also be found in our living and working environment, e.g. in medicines, cosmetics, household chemicals, dusts, vapours, paints, lacquers, solvents and disinfectants, technical equipment, water pipes and energy-saving light bulbs.

## DETOX NATURALLY - TO PROTECT YOUR HEALTH!

ZeolithMED, BentonitMED and ZeoBentMED are natural medical products made from the indigestible natural minerals clinoptilolite zeolite and montmorillonite bentonite, which bind harmful substances in the gastrointestinal tract like a sponge and can eliminate them from the body naturally. The harmful substances bound to zeolite and bentonite are excreted naturally via the intestines without burdening the metabolism. The effect of the medical products ZeolithMED, BentonitMED and ZeoBentMED is based on their special property of binding harmful substances in the digestive system and relieving the organism. This reduces symptoms such as tiredness and headaches caused by an increased heavy metal load.

## CERTIFIED MEDICAL DEVICES IN TOP QUALITY!

When it comes to detoxification with natural minerals, you should always look for CE-labelled and certified products that are intended for internal use. This guarantees quality, safety and effectiveness. All medical products in our shop have been approved by an external testing centre in accordance with the latest EU Regulation 2017/745 (MDR - Medical Device Regulation). Trust only the best when it comes to your health!

## WHICH MINERAL?

### ZeolithMED - the classic detox specialist

The natural mineral zeolite (clinoptilolite) has been used for natural detoxification since ancient times and is known for its effective pollutant-binding properties (adsorption). For example, the exploded nuclear reactor in Chernobyl was buried with 22,000 tonnes of clinoptilolite zeolite and made radiation-proof. Zeolite in laboratory-tested quality, approved as a medical product, certified and monitored by a state notified body, is available from us in various degrees of grinding as ZeolithMED in cans and violet jars:

**ZeolithMED powder**  
**ZeolithMED capsules**  
**ZeolithMED powder ultrafine**

### BentonitMED - the gentle detoxifier with a protective gel film

This fine powdered clay mineral from volcanic ash has a different mineralogical structure to zeolite and expands many times its original size when water is added. When administered orally, bentonite forms a thin protective film of montmorillonite gel. This protective gel film gently coats the mucous membrane of the stomach and intestines, which can reduce the effect of pathogenic factors. BentonitMED is therefore particularly suitable for detoxifying sensitive mucous membranes in the digestive tract. Bentonite in pharmacy quality, approved as a medical product, certified and monitored by a state notified body, is available from us as BentonitMED in tins and violet jars:

**BentonitMED powder**  
**BentonitMED capsules**

### ZeoBentMED - our all-rounder & power detoxifier

For all those who can't decide which mineral is the favourite for their detox cure, we have the perfect choice: ZeoBentMED. Our popular mixtures of zeolite and bentonite powder combine the properties of both volcanic minerals. Together, these two natural minerals can support the elimination of harmful substances and thus make a valuable contribution to protecting your health. Zeolite + bentonite mixed in laboratory-tested quality, approved as a medical product, certified and monitored by a state notified body, are available from us as ZeoBentMED in tins and violet jars:

**ZeoBentMED powder**  
**ZeoBentMED capsules**  
**ZeoBentMED powder ultrafine**

## POWDER, ULTRAFINE POWDER OR CAPSULES?

We offer zeolite in different particle sizes as a nanoparticle-free powder. Our ultra-fine powder is micronised even smaller than our powder and therefore has an even larger inner surface area for binding pollutants.

Capsules are easy to dose and, due to their simple and practical application, are the ideal companion for on the go, e.g. when travelling or doing sport. The capsule shells open in the stomach, allowing the previously encapsulated mineral to take effect from the stomach. Our capsule shells are purely plant-based (vegan) without any additives or admixtures.

### Application and dosage examples

The product can be used for up to 12 weeks. Powder and ultra-fine powder can simply be stirred into a glass of water (250 ml) and drunk with a meal. When stirring the fine powdered bentonite powder into water, the use of a whisk, stirrer or whisk is very helpful. Please do not inhale dust!

The dosage varies depending on the selected mineral and degree of fineness - here is an example using ZeolithMED:

<b>Zeolite powder:</b>	2-3 times daily 1 levelled teaspoon (=2 g)
<b>Zeolite powder ultrafine:</b>	2-3 times daily ½ levelled teaspoon (= 1 g)
<b>Zeolite capsules:</b>	<b>2 capsules 2-3 times a day</b>

Please follow the instructions for use, which can be found directly on the label.

## CAN OR VIOLET GLASS?

The right storage is important to us. That's why we have generated two ideal options - which you can choose from depending on your personal preferences. The high-quality material of the plasticiser-free jars is impermeable and lightweight, making them ideal for our natural minerals. Before you use our product for the first time, you can easily confirm its originality by removing the sealing strip. The tin can then be resealed tightly. The second packaging option is dark violet glass, also known as Miron glass, and offers protection in a class of its own: it also cannot react with its contents, give off any flavour or absorb any odours. Thanks to their wide opening, our jars are easy to refill.

## BODY CARE

When it comes to body care, everyone has a choice: chemicals versus nature. Unfortunately, many problematic chemical or synthetic raw materials with harmful effects on humans and animals are permitted in conventional cosmetics. These controversial substances are banned in natural cosmetics. Our natural cosmetics contain nothing artificial, are free from silicones, parabens, palm oil and nanoparticles and are produced in accordance with the requirements of the „NATRUE“ natural cosmetics label.

### ZeolithMED TOOTHPASTE

Without fluoride. The cleansing zeolite is combined with plaque and caries-reducing xylitol. The anti-cariogenic effect is based on the fact that the bacteria that cause tooth decay, such as Streptococcus mutans, are inhibited in their growth. They cannot metabolise xylitol and are therefore starved out. They are also prevented from attaching to the tooth surface as plaque bacteria. Peppermint oil provides a fresh flavour. Chamomile extract and ginger root extract have an anti-inflammatory effect.

### ZeolithMED SKIN CREAM FOR DRY SKIN

The classic detoxification specialist zeolite is supplemented in our rich skin cream with valuable jojoba oil, natural vitamins A and E, squalane, cocoa butter, urea and sea salt. Vitamin A protects against free radicals and light-induced skin damage. Natural vitamin E protects the skin from premature ageing caused by exposure to light. Sea salt promotes healing and firms the skin. Urea has a moisturising, nourishing, moisturising and healing effect. A hint of lemongrass and orange oil provides a pleasantly light fragrance.

## QUESTIONS?

We are also available for personal support by telephone.
