

Detox naturally with volcanic minerals

WHY DETOX?

In our present-day diet, we unfortunately supply our bodies not only with valuable substances like vitamins and minerals but we also absorb substances that in certain quantities can be damaging to our health. Among such substances include environmental contaminants such as heavy metals, aluminium, and ammonium, which can get into foodstuffs through air, water, and soil contamination. These substances have the unpleasant property of building up in the food chain. Furthermore, these substances can be found in our living and working spaces, e.g. in medication, cosmetics, household chemicals, sprays, vapors, paints, lacquers, solvents and disinfectants, technical devices, water lines, energy saving lightbulbs.

DETOX NATURALLY – FOR HEALTH PROTECTION!

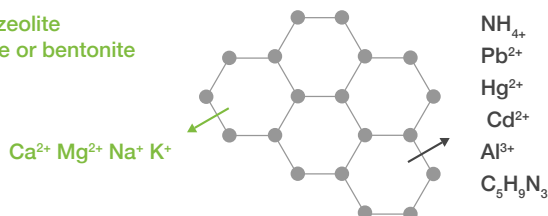

ZeoliteMED, BentoniteMED and ZeoBentMED are natural medical products from the indigestible natural minerals clinoptilolite-zeolite and montmorillonite-bentonite, which can bind to pollutants in the gastrointestinal tract like a sponge and draw them out of the body by natural means. The harmful substances that are bonded to zeolite and bentonite are naturally excreted with stool via the intestines within approximately 24 hours without burdening the metabolism. The effect of medical products ZeoliteMED, BentoniteMED and ZeoBentMED is based on their special property to bind to harmful substances already existing in the digestive system and thereby to unburden the endogenous detoxification organs. In this way not only do fewer toxins get in the body, but even pre-existing pollutants can be channelled out through osmotic gaps and through the dynamic equilibrium of living organisms.

THE DETOXIFICATION PRINCIPAL

The natural minerals zeolite and bentonite contained in medical products have, among other properties, the special ability to bind to harmful substances like aluminium (Al³⁺), lead (Pb²⁺), mercury (Hg²⁺), cadmium (Cd²⁺), ammonium (NH₄⁺) and histamine (C₅H₉N₃) through selective ion exchange and adsorption.

Scheme for selective ion exchange:

natural zeolite
structure or bentonite

WHICH MINERAL?

ZeoliteMED – the classic detoxification specialist

The natural mineral zeolite (clinoptilolite) has been used for natural detoxification since antiquity and is known for its capacity to effectively absorb harmful substances. For example, the nuclear reactor that exploded in Chernobyl was covered with 22,000 tons of clinoptilolite-zeolite and made radiation-safe. We provide pharmacy quality zeolite, which is tested, certified, and monitored as a medical product by a state-appointed authority, in the form of ZeoliteMED in tubs and violet glass jars:

ZeolithMED powder
ZeolithMED capsules
ZeolithMED ultra-fine powder

BentoniteMED – the gentle detoxifier with a protective gel film

This powdery-fine clay mineral from volcanic ash has a different mineralogical structure than zeolite. Upon oral administration, bentonite builds a thin montmorillonite protective gel film. This protective gel film coats the mucous membrane of the stomach and intestines, whereby the adverse effects of disease-causing factors can be reduced and the nerve endings of the stomach and intestines calmed. BentoniteMED is especially suitable for detoxification of the sensitive mucous membrane in the digestive tract. We provide pharmacy quality bentonite, which is tested, certified, and monitored as a medical product by a state-appointed authority, in the form of BentoniteMED in tubs and violet glass jars:

BentonitMED powder
BentonitMED capsules

ZeoBentMED – a mixture of Zeolite + Bentonite

Mixtures of zeolite and bentonite unite the properties of both of these volcanic minerals. Previous experience has shown that both minerals mutually complement and strengthen each other in their effects and are therefore recommended for intensifying detoxification treatments, e.g. after bentonite or zeolite. We provide a pharmacy quality mixture zeolite + bentonite, which is tested, certified, and monitored as a medical product by a state-appointed authority, in the form of ZeoBentMED in tubs and violet glass jars:

ZeoBentMED powder
ZeoBentMED capsules
ZeoBentMED ultra-fine powder

POWDER, ULTRA-FINE POWDER OR CAPSULES?

We offer zeolite in different particle sizes as nanoparticle-free powder. Our ultrafine powder is micronised even smaller than our powder and thus has an even larger inner surface for binding pollutants.

Capsules are good for measuring out dosage and their easy administering make them the ideal companion for when you're on the go, e.g. while traveling or when doing sports. The capsule casings open up in the stomach, whereby the effect of the pre-encapsulated minerals begins in the stomach. Our capsule casings are purely vegetable (vegan) without any additives or admixtures.

Dosage examples

Usage can occur as necessary over days, weeks or months. The powder and ultra-fine powder can be easily mixed with water as needed from a pulpy to a runny consistency. When stirring bentonite powder in water it is helpful to use a beater or whisk. No not inhale powder! Dosage should happen slowly and gradually on an individual basis and is weightdependent, for example:

Powder:

1 heaping teaspoon 1 to 3 times daily as needed

Ultra-fine powder:

½ teaspoon 1 to 3 times daily as needed

Capsules:

Take 1 to 2 capsules 1 to 3 times daily as needed

CAN OR VIOLET GLASS?

The plasticizer-free cans are light and handy, especially for on the go. As a packaging material, violet glass, a dark violet energy-saving glass, offers a completely new perspective: it only allows violet, ultraviolet and infrared light into the glass jar. Measurements show that violet light has the highest vibration frequency (705 trillion hertz) of all colors and is the highest in energy. The unique spectral range of violet glass energizes while providing optimal protection of the contents' molecular structure from the weakening effects of light. In this way, organic substances can be stored for longer in violet glass jars. Thanks to their wide openings, violet glass jars can easily be refilled.

NATURAL COSMETICS

The classic detox specialist zeolite is complemented in our rich skin cream with valuable jojoba oil, natural vitamins A and E, squalane, cocoa butter, urea and sea salt. Vitamin A protects against free radicals and light-induced skin damage. Natural vitamin E protects the skin from light-induced premature skin ageing. Sea salt promotes healing and tightens the skin. Urea has a moisturising, skin-caring, moisturising and healing effect. A hint of lemongrass and orange oil provide a pleasant light fragrance.

ZEOLITMED TOOTHPASTE

Fluoride free. The cleansing ability of zeolite is combined with xylitol to reduce plaque and cavities. This anticariogenic effect is due to the inhibited growth of cavity-causing bacteria like streptococcus mutans. They cannot metabolize xylitol and are thereby starved out. Furthermore they are also prevented from adhering as plaque bacteria to the tooth's surface. Peppermint oil provides a fresh taste. Chamomile extract and ginger root extract have an anti-inflammatory effect..

ZEOLITMED SKIN CREAM

Pollutant-binding zeolite supports skin regeneration. Skinnourishing ojoba oil lightly penetrates. Its excellent depth effect regulates the moisture balance of the skin. Natural vitamin E protects the skin from premature aging caused by light. Glycerin is a moisturizer. Cocoa butter absorbs into the skin very quickly, nourishes and leaves behind a velvety feeling. A touch of lemongrass and orange oil provides a light, pleasant scent.
